Keep Curious

- **Maintain childhood curiosity**
- **Don't let your major limit your development**
- **Find questions in life and find answers in learning**

The Autumnal Equinox

6:00

联立①、②式，得

$$\frac{y^2}{R^2} + \frac{x^2}{(aR)^2} = 1 \quad (1.2)$$

$$\begin{cases} y^2 = \frac{(a^2 - b^2)R^2}{a^2 - 1} \\ x^2 = bR - \frac{(a^2 - b^2)R^2}{a^2 - 1} \end{cases} \quad (1.3)$$

$$x^2 = bR - \frac{(a^2 - b^2)R^2}{a^2 - 1} \quad (1.4)$$

设昼长为 σ

$$\tan \angle \sigma = \frac{y}{x} = \sqrt{\frac{y^2}{x^2}}$$

③式除以④式得

$$\frac{y^2}{x^2} = \frac{\frac{(a^2 - b^2)R^2}{a^2 - 1}}{bR - \frac{(a^2 - b^2)R^2}{a^2 - 1}} \quad (1.5)$$

化简，得

$$\frac{y}{x} = \frac{1}{a} \sqrt{\frac{a^2 - b^2}{b^2 - 1}} \quad (1.6)$$

$$\tan \sigma = \frac{1}{\sin \alpha} \sqrt{\frac{\sin^2 \alpha - \cos^2 \beta}{\cos^2 \beta - 1}} \quad (1.7)$$

则有

$$\sigma = \arctan \left(\frac{1}{\sin \alpha} \sqrt{\frac{\sin^2 \alpha - \cos^2 \beta}{\cos^2 \beta - 1}} \right) \quad (1.8)$$

设日长为 T ，则

$$T = \frac{\text{昼长角}}{180^\circ} \times 12h = \frac{2\angle \sigma}{180^\circ} \times 12h = \frac{\angle \sigma}{90^\circ} \times 12h \quad (1.9)$$

$$T = \frac{\arctan \left(\frac{1}{\sin \alpha} \sqrt{\frac{\sin^2 \alpha - \cos^2 \beta}{\cos^2 \beta - 1}} \right)}{90^\circ} \times 12h \quad (1.10)$$

若直射点与观测点在同一半球，则上述方法计算的为夜长，当用 $24h - T$ 求出日长。
因为无论在地球的哪个地方，正午时间均为 12:00。则可用正午时间减去昼长的一半
计算理论日出时间。设理论日出时间为 t ，则有：

```

82     return 0;
83 }
84
85 double dayday(int a,int b)//计算偏离春分天数
86 {
87     int aa=3,bb=21;
88     int i;
89     for(i=0;a!=aa||b!=bb;i++)
90     {
91         if(b==yue[a])
92         {
93             if(a==12)a=1,b=1;
94             else a++,b=1;
95         }
96         else b++;
97     }
98     if(i>365/2)i=365-i;
99     return i;
100 }
101 double oumega(int i)//计算公转偏角
102 {
103     double jiao=fabs(90-jiao*jiao*i);
104     double omega=90-jiao;
105     if((ba>3&&ba<9)||((ba==3&&ab>21)||((ba==9&&ab<23)))omega=-omega;
106     return omega;
107 }
108 double chiwei(double omega)//计算赤纬
109 {
110     omega=turn(omega);
111     double huang=turn(23.43333333);
112     double chiwei=asin(sin(omega)*sin(huang));
113     return chiwei;
114 }
115 int main()//主函数

```

Interest is the best teacher

Be Creative

- **Feeling the sense of achievement while Creating**

How to be happy to creat

- Try to make something that you never thought you can make.
- Tell the creating progress to your partner.
 - Especially to a girl.

Be Creative

- **Feeling the sense of achievement while Creating**
- **PjBL: Learning while Creating**

Learning while Creating

- **To new knowledge: Requirement is the second best teacher**
- **To old knowldege: Practice makes perfect**
- **Creating is a process of learning and practicing**

Be Creative

- **Feeling the sense of achievement while Creating**
- **PjBL: Learning while Creating**
- **Take what you have learnt into use**

- **Difference between Engineering and Science**
- **Why there is no Nobel Prize in math?**

Research & Apply

Science & Engeneering

Science
Research

Engeneering
Apply

No Nobel Math Prize

**People can't
benefit directly
from Math**

Summary

- **Be curious enough to find problems and be creative enough to solve problems**
- **Broaden your horizon and not just stick to your major**
- **Interesting and Requirement. Practice makes perfect**
- **Feel the joy of applying knowledge**
- **Improve Happily, No Process Elimination**

Thanks for Listening
